1. General Information

1.1 Provisional dates

Taking into account the annual ICF calendar, the event will occur from 25th of September to 30th of September 2018. The venue would be available, at least for the full week, with practices and training scheduled in the days that precedes the Opening.

1.2 Event title

2018 ICF Canoe Slalom World Championships | Rio de Janeiro - Brazil

1.3 Information about the city

Venue: The event will take place on Rio Canal White Water Center

State: Rio de Janeiro

City: Rio de Janeiro

Population: 6.476.631

Rio de Janeiro is the most visited city in the southern hemisphere and is known for its natural settings, carnival celebrations, samba, Bossa Nova and beaches such as Barra da Tijuca, Copacabana, Ipanema, and Leblon. Some of the most famous landmarks, in addition to the beaches, includes: the giant statue of Christ the Redeemer (“Cristo Redentor”) on the top of Corcovado mountain, named one of the New Seven Wonders of the World; Sugarloaf Mountain (Pão de Açúcar) with its cable cars; the Sambódromo, a permanent grandstand-lined parade avenue which is used during Carnival; and Maracanã Stadium, one of the world’s largest soccer stadiums.

Rio de Janeiro hosted the Rio 2016 Olympic Games, which marked the first time a South American city to host the event. Rio’s Maracanã Stadium hosted the final match for 2014 FIFA World Cup. Rio de Janeiro is Brazil’s primary tourist attraction and resort, receiving the largest number of visitors per year, 2,82 million international tourists a year, of any other city in South America.

The average annual minimum temperature is 20 °C (68 °F), the average annual maximum temperature is 28 °C (82 °F), and the average annual temperature is 23 °C (73 °F). The average of precipitation is 109 cm. According to INMET, the minimum temperature recorded was 8 °C (46 °F) in July; and the absolute maximum was 44 °C (111 °F) in February. Temperatures below 10 °C (50 °F) are very rare in the city.

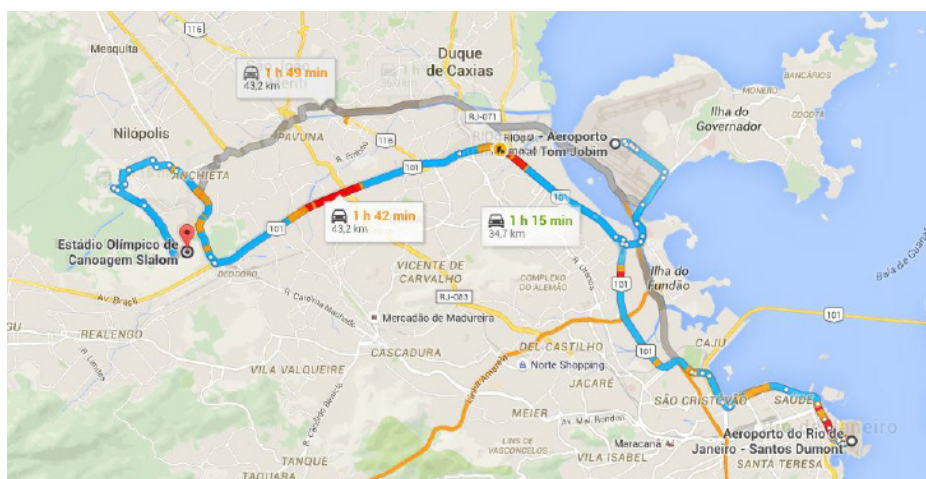

The temperature varies according to elevation, distance from the coast, and type of vegetation. Winter brings mild temperatures and less rain than in the summer.

1.4 Location of Airports, rail network and roads to the venue/city

The city of Rio de Janeiro is conveniently located and accessible through many cities being São Paulo one of them.

Airports

The city of Rio de Janeiro has one International Airport that is called

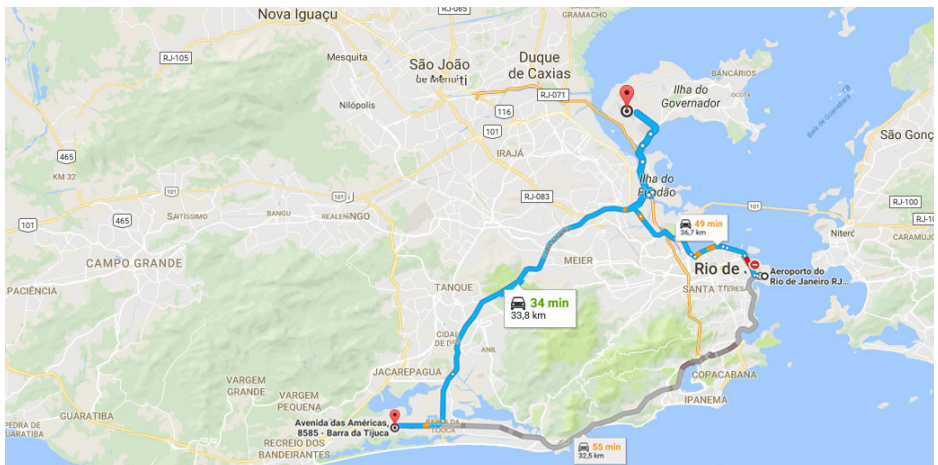

Aeroporto Internacional Antônio Carlos Jobim (Galeão).

Galeão - Antônio Carlos Jobim International Airport: the airport is used for all international and most of the domestic flights.

Aeroporto Santos Dumont

Santos Dumont - Santos Dumont Airport is the 7th most trafficked airport in Brazil and is located in the financial center of Rio de Janeiro. It was built in 1936 and has the air-brigde Rio-São Paulo, as it is the main route that has at least 4 million passengers per year. It was the first exclusively civil airport to be built in the country.

Routes Airport - Hotels

1.5 Map of the location of the venue in relation to major cities in the country

Below are the distances of the major cities in Brazil to Rio de Janeiro:

Curitiba (Brazilian Canoe Confederation Head Office)

850 km

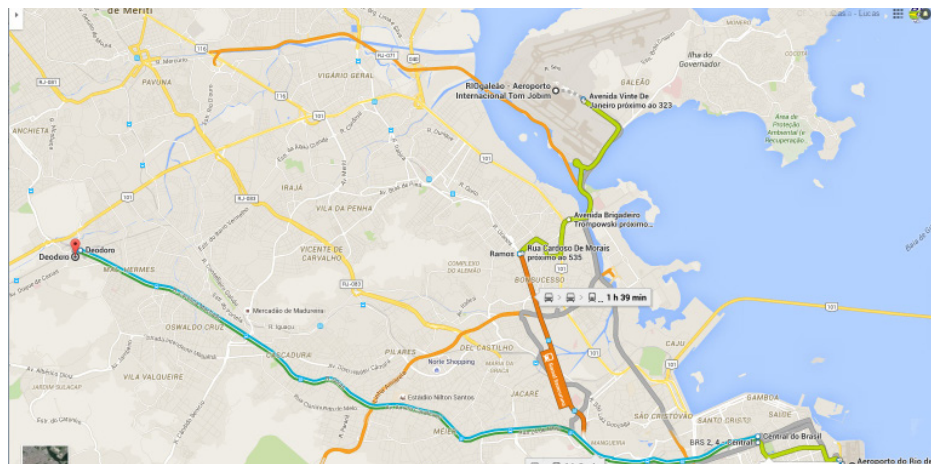

São Paulo

440 km – 5:30 hours drive

Brasília

1.162 km

Metrorail

2. Participation Fee

2.1 Participation Fee and Services

A Participation Fee of €130 Euro will be charged for each accredited athlete and team official, to cover the duration of the Official Training and Competition periods of the 2018 ICF Canoe Slalom World Championships.

2.2 Services

The Participation Fee includes the following service provisions, which will be provided to all accredited athletes and team personnel during the Official Training and Competition phases (unless otherwise stated) of the 2018 ICF Canoe Slalom World Championships:

Transportation system from the hotels to the competition facility and the competition facility for the hotels according to the schedule to be defined later.

3. Sport/Competition Information

3.1 Description of Competition Venue and sport infrastructure

The competition venue will offer the highest level of Canoe Slalom racing opportunities. The blocks, water tuning and gate system are planned to equal the best there are in the world.

Although the permanent building will be modest, there is suitable space for the additional overlay required. Spectators will have extensive and natural grandstand seating (4.000 easily, more if grand stands are installed). While permanent changing facilities and toilets will be of good quality, we are aware that for such a big event we need to increase the toilets available on the venue and this will be part of the overlay.

With spectators in one side and an island for race organization and television operations, the venue is easily operated. The connecting bridge at the course finish line establishes a smart link for race organization.

There is ample space for concessions and the venue entrance is capable of handling large crowd flows. Access using trains is good from Rio de Janeiro Central Station and car parking is planned for those that drive in. While Rio de Janeiro area needs to develop its Canoe Slalom expertise, most of the race organization core – slalom expertise - would come from other parts of Brazil in order to run the race.

3.2 Presentation of the technical aspects of the course

The venue, that has been constructed for the Rio 2016 Olympic Games, sets an exceptionally high standard of technical delivery. The competition channel fulfills ICF's requirements offering 250m of suitable white water channel with a 4.5m descent from the start pool to the finish pool and a flow of 12 cumecs (m³/s) of water offered by 4 pumps.

White water configuration is controlled through the RapidBlocs system. Slalom gates are suspended from parallel cables, offering efficient adjustment and changeover of gates. Warm up is available both on the lake and on the training channel, the latter offering 160m of white water, with a 2.6m descent from the start pool to the finish pool and a flow of 10 cumecs (m³/s) of water offered by 3 pumps that deliver up to 10m³/s. Ducting for cables, for timing and judging communications will be in place.

3.3 Contingency Plan

POWER: Main electric power supplies are backed up with two independent power sources. New substations were finalized in 2015, securing robust supplies to the venue and surrounds.

PUMPS: Four pumps will operate at 75% of its capacity supplying the necessary flow. In case of a pump failure, 3 pumps can supply the same flow. This configuration is even more efficient than the use of a spare pump.

3.4 Weather

The Brazilian winter offers ideal temperatures for slalom competition. Temperatures all year round are warm though we choose to avoid the Brazilian summer when Deodoro can prove too hot for large crowds in

sunshine.

WATER: The condition of the water is daily checked and it's quality is guaranteed.

3.5 Competitions and Programme

According to the ICF calendar in 2018 we are offering the teams two periods of 5 days each for training on the venue. Inclusive arrangements will be made for ICF Development athletes to have quality time on the course.

Official Training

The official training will be set 7 days prior to the competition, as schedule below including one preparation day with reduced training.

Proposed Competition Schedule

March 17th - March 21st | 1st period of training

Deadline for scheduling training: January 1st 2018

September 13th - September 17th | 2nd period of training

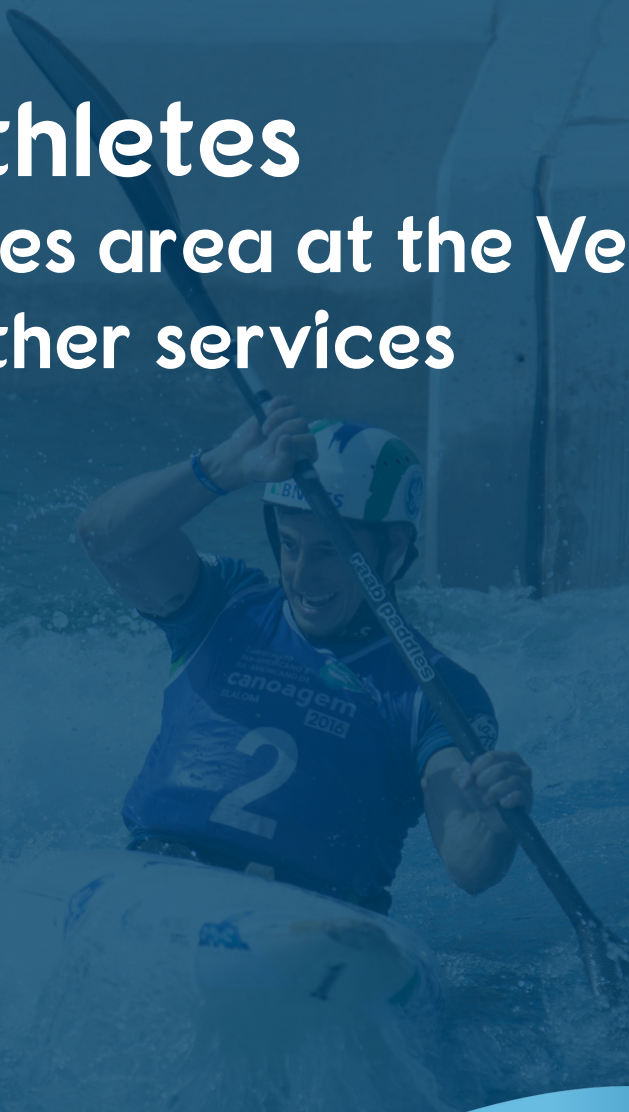

Deadline for scheduling training: August 1st 2018

September 18th - September 24th | Official training period

September 25th - September 30th | 2018 ICF Canoe Slalom World Championships

4. Athletes

Athletes area at the Venue and other services

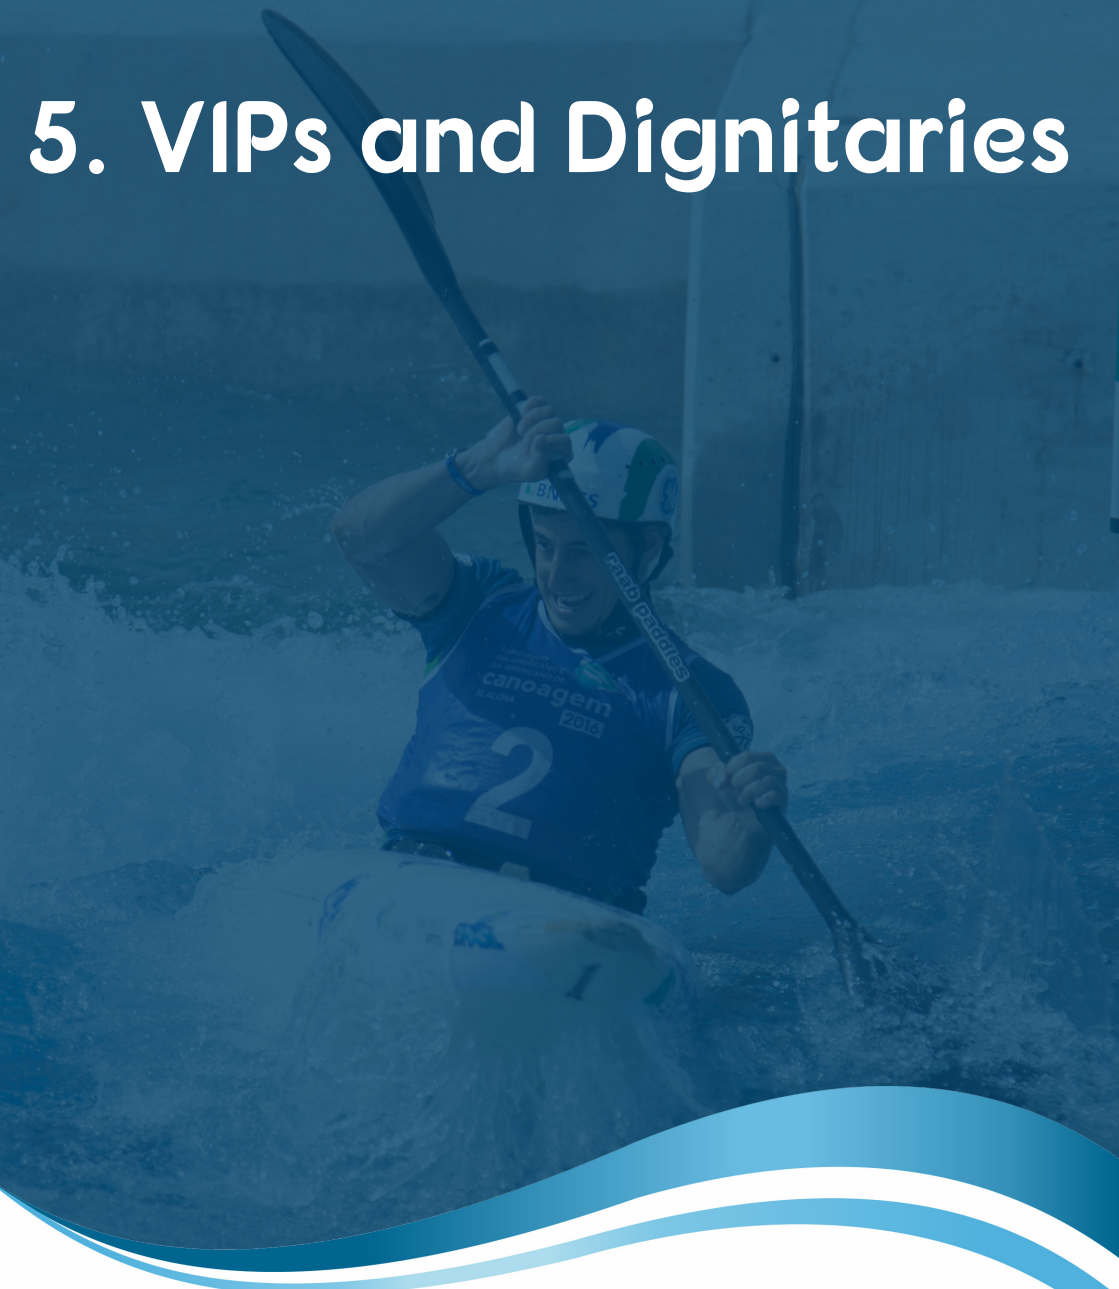

4.1 Athletes Area Characteristics

Facilities for athletes in the athletes' area are planned:

- I. Athlete rest tents including physio areas on request per athlete with basic furniture and sufficient power for charging phones/cameras etc.
- II. Athlete social shared area with competition video screen, internet and power points.
- III. Boat storage area on site, close to the lake.
- IV. Training time on the competition channel for a minimum of 7 full days prior to competition.
- V. Changing, toilets and shower rooms.
- VI. Boat repair facilities including a dedicated person to assist and a back-up provision of repair materials.
- VII. Water for drinking, readily available for purchase (sponsored if we achieve that).
- VIII. TVS 'on demand' download capability. Hopefully by then we will have upgraded to a shared file server and open access.

5. VIPs and Dignitaries

5.1 Facilities and Services

A fully serviced VIP hospitality area will be established within the Competition arena to guests and dignitaries.

The area will include the following facilities as a minimum:

- **Clear views of Competition Area**
- **Designated VIP Grandstand seating area**
- **TV Screens and Competition Information**
- **Hot and Cold meals/snack**
- **Wide choice of beverages**

Office facilities will also be available for these who require such services.

6. Accommodations

6.1 Location in comparison to the competition venue

There are plenty of hotels of many different standards levels in a range around of 40 kilometers (25 to 40 min) to the course.

6.2 Provisional Cost of Accommodation by type

***Money exchange rate US\$ 1 = R\$ 3,50**

Gaivota Rio Hotel (3 stars)

Address: Av. Belisário Leite de Andrade Neto, 406

Phone: +55 (21) 3139-1450

Single Apartment: +/- R\$ 162,00 (US\$ 46,28)
