INTRODUCTION

The purpose of this manual is to guide ICF Paracanoe Classifiers in the completion of the classification process for all Va’a paddlers with physical impairments.

This Manual supports the ICF Paracanoe Classification Rules and Regulations.

On February 1st, 2015, the International Paralympic Committee (IPC) announced the recognition of Paracanoe-KAYAK as an official event at the Rio 2016 Paralympic Games. Therefore the Paracanoe Kayak classification system is approved by the IPC. At the same time it did not recognize Paracanoe Va’a events as Rio 2016 events. Consequently, the new proposed Va’a athlete classification system which will be used for 2015 onward is provisional and will form the basis of the next application to the IPC in late 2016.

ICF PARACANOE CLASSIFIERS

An ICF Paracanoe Classifier is one who has been approved as such by the ICF after undergoing the required training for the purpose. There are two types of ICF Classifier:

1. ICF Medical Classifier: a medical doctor or physiotherapist,
2. ICF Technical Classifier: a person with extensive practical knowledge of canoeing with experience such as a canoe-kayak coach, sport scientist, former paddler, physical educator or similarly qualified person.

For both types of ICF Classifier, experience with Paracanoe is an advantage but not a requirement.

The ICF Paracanoe Committee shall appoint one Head of Classification. The Head of Classification and The ICF Paracanoe committee will appoint one Chief Classifier for each ICF recognized Paracanoe Competition as needed.

GENERAL

If after completion of all tests, the Classification Panel determines there is an unclear assessment leading to a ‘borderline’ assessment, the paddler shall be assigned the more functional sport class, and given Review status.

NOTE: When a Physical Assessment suggests higher abilities than what is observed in the On-Water Technical Assessment, the Athlete history and experience becomes relevant. An Athlete with a short history in the sport may have the ability to achieve higher Functional Objectives but has not yet spent the requisite time and conducted sufficient training to apply these abilities through training. As the abilities may be training specific and should thus not be considered in classification, the Physical Assessment will carry greater significance.

This information will be noted on the application form. The application form shall be completed and signed by both classifiers. The classifiers must also print their name legibly. The paddler must also print and sign his/her name on the form. Both classifiers must agree on the sport class.

A “C” (Confirmed) status will be given if the paddler is classified by an ICF International Classification Panel and the paddler’s status is not likely to change.

An “N” (New) status will be given if the paddler is not classified by an ICF International Classification Panel.

An “R” (Review) status will be given if the paddler is classified by an ICF International Classification Panel and the paddler wears a prosthetic or orthotic device that may affect the paddling ability, or they have a progressive disability that may improve.

Once complete, all forms are to be forwarded to the ICF Paracanoe Head of Classification addressed as follows:

Ms Julie Gray
ICF Paracanoe Head of Classification
canoejulie@sky.com

If the paddler plans only to compete in a local or National Competition, the forms should not be forwarded to ICF.

Copies of all forms should be forwarded to the national federation of the paddler concerned.

NOTE: All forms contain confidential information. Consequently, they are only to be used for the purposes of classification of the athlete. Use of the forms for any other purpose is strictly forbidden.

ICF Paracanoe Classification Manual
13/03/2015
ICF PARACANOE VA’A SPORT CLASS’s

ELIGIBLE IMPAIRMENTS
There are four (4) eligible impairment groups for ICF Paracanoe-VA’A:

- Impaired Muscle Power,
- Impaired Range of Motion,
- Limb Deficiency.
- CPISRA Class 4

They apply to the Upper and Lower Limbs and the Trunk.

The following impairment groups are not eligible for ICF Paracanoe –VA’A:

- Leg Length difference
- Short Stature
- Hypertonia (non-CPIRSA Class 4)
- Ataxia (non-CPIRSA Class 4)
- Athetosis (non-CPIRSA Class 4)
- Vision Impairment
- Intellectual Impairment

MINIMUM ELIGIBILITY
Athletes must lose a minimum of four (4) points on one lower limb to be eligible.

SPORT CLASSES – VA’A
ICF recognizes three (3) sport classes for Paracanoe Va’a: VL1, VL2, VL3

**VL1**

**Total Score = 3**

Athletes with no or very limited trunk function and no leg function and typically need a special seat with high backrest in the Va’a

- OR
- Upper Limb Cluster 1
- OR
- CP Class 4

**VL2**

**Total Score = 4 – 7**

Athletes with partial trunk and leg function, able to sit upright in the Va’a but might need a special backrest, limited leg movement during paddling

- OR
- Upper Limb Cluster 2

**VL3**

**Total Score = 8 – 9**

Athletes with trunk function and partial leg function, able to sit with trunk in forward flexed position in the Va’a and able to use at least one leg/prosthesis

- OR
- Upper Limb Cluster 3
VL1
The VL1 class is for Va’a paddlers who score a Total Cluster Score of 3:
- TRUNK Tests: Cluster 1 (0 – 16 pts), and
- LEGS Tests: Cluster 1 (0 - 2), and
- ON-WATER Test: Cluster 1 (0 – 3)
- UPPER LIMBS Tests: Cluster 1 (0 -10)

Or are classified by CP-ISRA as Class 4 (See Note below: “Athletes with Cerebral Palsy”)

VL2
The VL2 class is for Va’a paddlers who score a Total Cluster Score of between 4 and 7 (inclusive) by the following:
- TRUNK Tests: Cluster 1 (0 – 16 pts) or 2 (17 – 68 pts) or 3 (69 – 84 pts), and
- LEGS Tests: Cluster 1 (0 - 2) or 2 (3-17), and
- ON-WATER Test: Cluster 1 (0 – 3) or 2 (4 – 7) or 3 (8 – 10)
- UPPER LIMBS Tests: Cluster 1 (11 -14)

VL3
The VL3 class is for Va’a paddlers who score a Total Cluster Score of 8 or 9 by the following:
- TRUNK Tests: Cluster 2 (17 – 68 pts) or 3 (69 – 84 pts), and
- LEGS Tests: Cluster 2 (3 – 17) or 3 (18 – 24), and
- ON-WATER Test: Cluster 2 (4 – 7) or 3 (8 – 10)
- UPPER LIMBS Tests: Cluster 1 (15 - 22)

NE
The NE sport class is for Paddlers who do not meet the minimum impairment and are thus “Not Eligible” to compete as a Paracanoeist.

NOTE
Athletes with Cerebral Palsy
As part of the continuing development of Paracanoe, and to further research into the classification system, the ICF extends an invitation to athletes with Cerebral Palsy to take part in the non-Paralympic races at ICF sanctioned Paracanoe events: eg. World Cup, Continental Championships, World Championships.

To be clear, athletes with CP are only eligible for the Va’a races.

CP-ISRA class 4
Any athlete with Cerebral Palsy who wishes to compete in these events require previous classification by CP-ISRA as Class 4. This functional profile includes athletes with moderate to severe diplegia. Proof of that classification must be provided, in the form of the CP-ISRA classification card to the ICF Classification team prior to athlete classification. ALL athletes with Cerebral Palsy will be assigned a provisional classification of VL1.

Athletes will still undergo Trunk, Lower Limb, Upper Limb and On-Water testing, as part of the data collection process for classification research. The analysis of the data will take place after the competition season has ended.
NOTE cont’d

Athletes with Upper Limb Impairments

As part of the continuing development of Paracanoe, and to further research into the classification system, the ICF extends an invitation to athletes with Upper Limb Impairments to take part in the non-Paralympic events (Va’a) at ICF sanctioned Paracanoe events: eg. World Cup, Continental Championships, World Championships.

To be clear, athletes with CP are only eligible for the Va’a races.
PROCESS FOR CLASSIFYING VA’A PADDLERS WITH A PHYSICAL IMPAIRMENT

The standard ICF classification process is conducted by an ICF Classification Panel comprised of two ICF Classifiers, an ICF Medical Classifier and an ICF Technical Classifier.

The process involves six steps:

1. **Physical Assessment of the UPPER LIMBS** – directed by an ICF Medical Classifier with ICF Technical Classifier in attendance.
2. **Physical Assessment of the LEGS** – directed by an ICF Medical Classifier with ICF Technical Classifier in attendance.
3. **Physical Assessment of the TRUNK** – directed by an ICF Medical Classifier with an ICF Technical Classifier in attendance.
4. **ON-WATER Technical Observation Test** – directed by both an ICF Technical Classifier and an ICF Medical Classifier. Observation should be completed while the paddler is aware of being observed and while not aware. This test will also involve a test on the ergometer prior to the On-Water part of the test.
5. **Observation Assessment** - The Classification Panel may conduct Observation Assessment, which shall involve observing an Athlete performing the specific skills that are part of the Sport in Competition. Observation Assessment shall take place if a Classification Panel cannot complete the Athlete Evaluation without observing the Athlete in Competition.
6. **Final Calculation and Conclusion of Classification.**

Notwithstanding Section 4 above, Classifiers shall, to the best of their ability, observe all paddlers in the Competition to ensure consistency with the abilities presented during the Evaluation. This observation shall also include the paddlers as they depart from the dock to ensure boats, paddler position in the boat and adaptive equipment are consistent with the Evaluation. Video recording of events is required.

PREREQUISITES FOR CLASSIFICATION

Paddlers seeking to be classified as a Paracanoeist must present the following documents to the appointed Chief Classifier of the Competition four weeks prior to the start of the competition:

- A completed **ICF Paracanoe Classification Application Form**
- A completed **Consent for ICF Paracanoe Paddler Classification Form**
- A completed **Declaration of Medical Conditions that may Require Emergency Measures Form**
- The **ICF Paracanoe Athlete Certificate of Diagnosis** form signed by a Medical Physician confirming the physical impairment, and the functional effect the disability has on the paddler. This must be in English.
- The paddler must present ready to be classified in close-fitting attire and ready to paddle.
- The ON-WATER Technical Observation must be done as noted:
  - in the specific boat, and
  - using the specific adaptive equipment in the precise location the competitor will use in the Competition.

Physical Assessment

**Materials Required**

- Plinth or mat table
- Goniometer
- All forms related to Paracanoe classification including medical documentation
- Wobble cushion (air-filled cushion)

**Process**

- Review required documentation (refer to above) to ensure proper completion.
- Interview paddler to ensure all diagnosis information is correct and detailed.
- All athlete Assessments and Classifications must follow the process outlined below.
STEP ONE: Physical Assessment of the UPPER LIMBS
This assessment will determine whether the paddler meets the minimum requirements to complete in Paracanoe events.

- Classifiers will use a 0-2 scale as noted on the Physical Assessment Chart for the UPPER LIMBS. The +/- scale will not be used for the purpose of this test.
- Use the Physical Assessment Chart for the UPPER LIMBS and the illustrated manual where sport specific ranges of movements are defined and descriptions on how each test will be executed.

- Enter the scores in the appropriate box, and total them below where indicated.
- All joint motions and strengths must be tested and scores entered. Failure to do so will result in an incomplete and therefore non-valid classification of the paddler.
- A paddler who meets the minimum disability requirements for Paracanoe (loss of 4 points) will be classified as eligible for the VL3 class, at a minimum.
- If any paddler does not meet the minimum disability, he/she will be deemed as Not Eligible to compete as an adaptive paddler, and the classification will end here.
- All findings must be documented on the Physical Assessment Chart for the UPPER LIMBS.

STEP TWO: Physical Assessment of the LEGS
This assessment will determine whether the paddler meets the minimum requirements to complete in Paracanoe events.

- Classifiers will use a 0-2 scale as noted on the Physical Assessment Chart for the LEGS (Kayak or Va’a). The +/- scale will not be used for the purpose of this test.
- Use the Physical Assessment Chart for the LEGS (Kayak or Va’a) and the illustrated manual where sport specific ranges of movements are defined and descriptions on how each test will be executed.

- Enter the scores in the appropriate box, and total them below where indicated.
- All joint motions and strengths must be tested and scores entered. Failure to do so will result in an incomplete and therefore non-valid classification of the paddler.
- A paddler who meets the minimum disability requirements for Paracanoe (loss of 4 points in one lower limb will be classified as eligible for the KL3 or VL3 class, at a minimum, subject to satisfactory completion of the On-Water Technical Observation assessment.
- If any paddler does not meet the minimum disability, he/she will be deemed as Not Eligible to compete as an adaptive paddler, and the classification will end here.
- All findings must be documented on the Physical Assessment Chart for the LOWER LIMBS (Kayak or Va’a).

STEP THREE: Physical Assessment of the TRUNK
This assessment will help the classifier to determine whether the paddler meets the minimum requirements to complete in Paracanoe events.

- Classifiers will use a 0-2 scale as noted on the Physical Assessment Chart for the Trunk. The +/- scale will not be used for the purpose of this test.
- Use the Physical Assessment Chart for the TRUNK and the illustrated manual (Appendix 3, illustrated guidelines for the Trunk Test) including descriptions on how each test will be executed.

- Enter the scores in the appropriate box, and total them below where indicated.
- All joint motions and strengths must be tested and scores entered. Failure to do so will result in an incomplete and therefore non-valid classification of the paddler.
- All findings must be documented on the Physical Assessment Chart for the TRUNK.
STEP FOUR: ON-WATER TECHNICAL ASSESSMENT

ERGOMETER Test
The ergometer test is the first part of the ON-WATER Technical Assessment. It is completed by an ICF Technical Classifier with an ICF Medical Classifier present. This test is obligatory but not scored. Observations made during this test provide valuable information to the Technical Classifier prior to the ON-WATER part of the test.

Materials Required
- Ergometer with fixed seat
- Adaptive seat with high back support
- Appropriate cushion to prevent tissue breakdown
- Any other necessary equipment for the individual paddler: eg. Foam, tape, Velcro strapping, etc.
- Video camera

The role of the ICF Technical Classifier is to assess the paddling motion when conducted on an ergometer.

Process
- The paddler’s sitting balance should be assessed on the ergometer. If the paddler presents with even fair trunk function/sitting balance and leg function then the assessment should be carried out on a standard seat. If the paddler’s sitting balance is compromised, a postural support seat similar or identical to the support (seat) to be used in the boat should be used. Additional trunk strapping should not be used immediately.
- If the paddler uses a prosthesis or orthosis while paddling, it should be worn during this test
- The classifier should begin to assess the paddler paddling with the least amount of assistance possible. The medical classifier should be guarding the paddler to prevent falls.
- The paddler will be asked to take enough strokes to fully represent his/her paddling ability. Such tests should be able to provide information for the ON-WATER Technical Assessment.
- Ergometer assessment should continue for sufficient time and at a variety of stroke rates including sufficient at a high stroke rate with maximum exertion to ensure the classifiers have reviewed the typical performance of the paddler as would be anticipated during a race.
- Observe paddler from the side, rear, and front for motion on the ergometer. Check if the paddler is able to achieve good force against the foot board. Allow the paddler to paddle with a full paddling stroke motion at 100% effort for a minimum of 2 minutes to assess paddler’s ability to maintain power and force against the foot board.
- Detailed documentation of the Classifiers’ observations is paramount to accurate classification, and should be as complete as possible. The ICF Technical Classifier should record clear statements on the ERGO Observation Chart of the paddler’s ability as observed through the ergometer test, having regard to the ICF functional objectives for each sport class. A photograph of the athlete which notes the equipment used for the test should be part of the documentation. A video of the test is also required to be part of the documentation.

ON-WATER TECHNICAL ASSESSMENT

ICF Medical and Technical Classifiers
The medical and technical classifiers will both observe the paddler while on the water, while training and/or racing.

Materials Needed
- Specific boat type to be used in the Competition for paddler (supplied by the paddler)
- The specific adaptive equipment the paddler will use in competition.
- Video camera (with video storage chips) with Videographer
- “GroPro” or similar portable camera with device for attachment to kayak or va’a boats
- Safety motor boat and driver

Objectives
The purpose of ON-WATER Technical Assessment is to assess the sport specific performance of the paddler having regard to completion of the ON-WATER Technical Assessment Observation Chart .
**Process**

Use the ON-WATER Technical Assessment Chart and video guides.

The On-Water Technical Assessment Test should be undertaken with consideration given to water conditions and safety. The paddler shall paddle a minimum of 200 metres away from the dock, turn, and 200 metres back to the dock. The paddler shall be observed from the left and from the right side. The paddler shall conduct at least one full start to the satisfaction of the Classifier. The paddler may be asked to repeat.

Only when the Classifier is satisfied the paddler has shown his full abilities and the abilities have been recorded on the ON-WATER Technical Assessment Chart is the ON-WATER Technical Assessment completed.

The Classifiers may request the paddler being classified to undertake a range of movements or novel agility tests and shall also observe the paddler during normal training and racing.

The specific boat type, the position of the paddler in the boat and the adaptive equipment used in the On-Water Technical Assessment must be identical to the boat type, paddler position in the boat and the adaptive equipment used in Competition. The Classifier shall ensure all this information is video recorded during the On-Water Technical Assessment. Video recording will be done by a videographer and may include video from the dock and video units in the boat (eg. “GoPro”) in order to have a complete video file.

The paddler may also be observed at any moment while representing his/her paddling ability including during Competition. They shall observe the paddler while he/she is aware of being observed, and while he/she is not aware of being observed. If the paddler uses a prosthesis or orthosis while paddling, it shall be worn during this test.

Complete and score the athlete as noted.

**STEP FIVE: OBSERVATION ASSESSMENT**

The Classification Panel may conduct Observation Assessment, which shall involve observing an Athlete performing the specific skills that are part of the sport in Competition. Observation Assessment shall take place if a Classification Panel cannot complete the Athlete Evaluation without observing the Athlete in Competition.

**STEP SIX: Final Calculation and Conclusion of Classification**

Once all the assessments have been completed, the two classifiers will jointly determine the “Final Classification” and the recommended sport class and status.

The Classification Panel combines the TRUNK, LOWER LIMB and ON-WATER Technical Assessment Cluster scorings as noted in the PARACANOE VA’A CLASSIFICATION OVERVIEW and the PARACANOE CLASSIFICATION PROCESS MAP to determine the Athlete Class. The PARACANOE VA’A CLASSIFICATION SUMMARY Form is used for this purpose.

The Cluster “Score” is the sum of the Cluster the athlete scores in each of the three tests (Trunk, Leg & On-Water). For example, if an athlete is in Cluster 2 in the Trunk test, Cluster 3 in the Legs test and Cluster 2 in the On-water test they will achieve a Summary Total score of “7” and would be placed in Sport Class KL2.

For the summary of Va’a Paddlers with upper limb impairments, only the Upper Limb scores are used.

**VL1**

The VL1 class is for va’a paddlers who score a Total Cluster Score of 3:

- TRUNK Tests: Cluster 1 (0 to 16 pts), and
- LEG Tests: Cluster 1 (0 -2), and
- ON-WATER Test: Cluster 1 (0 to 3).

or

- UPPER LIMBS Tests: Cluster 1 (0 -10)

Or are classified by CP-ISRA as Class 4 (See Note above: “Athletes with Cerebral Palsy”)
**VL2**
The VL2 class is for va’a paddlers who score a **Total Cluster Score** of between 4 and 7 (inclusive) by the following:

- **TRUNK Tests:** Cluster 1 (0 – 16 pts) or 2 (17 – 68 pts) or 3 (69 – 84 pts), and
- **LEG Tests:** Cluster 1 (0 - 2) or 2 (3 - 17), and
- **ON-WATER Test:** Cluster 1 (0 - 3) or 2 (4 - 8) or 3 (9 – 12)
  or
- **UPPER LIMBS Tests:** Cluster 1 (11 -14)

**VL3**
The VL3 class is for va’a paddlers who score a **Total Cluster Score** of 8 or 9 by the following:

- **TRUNK Tests:** Cluster 2 (17 – 68 pts) or 3 (69 – 84 pts), and
- **LEGS Tests:** Cluster 2 (3 - 17) or 3 (18 – 24), and
- **ON-WATER Test:** Cluster 2 (4 – 8) or 3 (9 – 12)
  or
- **UPPER LIMBS Tests:** Cluster 1 (15 - 22)

**NE**
The NE sport class is for Paddlers who do not meet the minimum impairment and are thus “Not Eligible” to compete as a Paracanoist.
PARACANOE - VA’A CLASSIFICATION OVERVIEW

Paracanoe-VA’A Classification

Physical Assessment

- **Upper Limbs**
  - Upper Limbs Tests
    - 0-2 scale

- **Trunk**
  - Trunk Tests
    - 0-2 scale
    - (Max. 84 p)

- **Leg**
  - Leg Tests
    - 0-2 scale
    - (Max. 28 p)

- **Onwater/ergo**
  - On Water Tests
    - 0-2 scale
    - (Max. 12 p – kayak)
    - (Max. 10 p – va’a)

**Boundaries for Total Score:**

**UPPER LIMB TEST CLUSTERS**

1: 0 - 10
2: 11 - 14
3: 15 - 22

**TRUNK TEST CLUSTERS**

1: 0 – 16  “No” trunk function
2: 17 – 68  Partial trunk function
3: 69 – 84  Full trunk function

**LEG TEST CLUSTERS**

1: 0 – 2
2: 3 – 17,
3: 18 – 24

**ON-WATER TEST CLUSTERS**

1: 0 – 3 (kayak & va’a)
2: 4 – 7 (va’a)
3: 8 – 10 (va’a)
