

OFFICIAL COMMUNICATION

Item – 1

Following the high water period of the Dora Baltea River in early June, one part of the dam control at the entrance of the white water course has been damaged.

Consequently the flow control is not guaranteed and the course is not suitable until this part of the dam is repaired (current flow is above 35m³).

On Monday 18th of June, the HOC, ICF Technical Committee Chair, the City of Ivrea and the water control authorities have met in Ivrea to assess the situation and establish a calendar for re-construction of this part of the dam prior to the World Championships.

This works programme will be affected by the regular seasonal snowmelt.

It is anticipated that this works programme will be completed by the 9th of July in time for the commencement of World Championships official training on 11th of July.

Should there be any change to this timetable (e.g. earlier) we will inform you directly.
